-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 3753

Claim 10 is objected to because of the following informalities: in line 6, both occurrences of “battle” should probably be changed to “baffle”. Appropriate correction is required.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 9-10, and 18-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Brigel. Brigel shows two baffles 9, 10, with rotary shafts 11, 12, extending out the same side of a housing, where each shaft is connected to a sector gears 13, 14. The two sector gears cause common drive of both shafts when a driver’s foot moves top sprocket 31. Regarding claims 9 and 18, Fig. 4 shows ledges 20 for making “close joints” when the valves are closed, and thus are seen as the recited baffles.

Claims 1, 9-10, and 18-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Noritake. Noritake shows a refrigerator with a dual damper arrangement (Fig 23) having a common actuator driving two baffles through a common drive and gears. Both shafts 5a come out the same side, and are connected to spur gears 5b driven by a common stepper motor with a reduction drive (Figs. 7-8).

Claims 2-8, 11-17, and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cabalfin shows a stepper motor 75 driving a reduction gear box 74 and other gears 64, 76, and 78, to rotate a valve. Fordsmand shows a refrigerator with a two piece baffle door 31, 31 controlled by linkage 37.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen M. Hepperle whose telephone number is 571-272-4913. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gene Mancene can be reached on 571-272-4930. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
